SUMMARY

Software Engineer with 3+ years of production experience building enterprise web applications and data-intensive user interfaces. Experienced in React, TypeScript, GraphQL, SQL, JavaScript, and full-stack development, with hands-on experience modernizing legacy applications, building reusable UI components, developing AI-driven features, and troubleshooting production systems. Strong background in automated testing, code reviews, Agile delivery, and cross-functional engineering.

CORE COMPETENCIES

Languages: TypeScript, JavaScript, Java, Python, C/C++, SQL, PHP
Frontend: React, HTML, CSS, DataGrid, Responsive UI, Accessibility (WCAG, WAI-ARIA)
Backend & Data: GraphQL, REST APIs, Node.js, MySQL, Oracle, MongoDB, MariaDB, Firebase
Engineering: Git, GitHub, GitLab, Linux, Bash, CI/CD, JUnit, Postman, Agile/Scrum
AI / Computer Vision: TensorFlow Lite, OpenCV, AI-assisted development

PROFESSIONAL EXPERIENCE

Front End Engineer

Sept 2023 – Aug 2026

ScienceLogic (Full-Time)

Reston, VA

- Modernized legacy application functionality by migrating PHP-based interfaces to React and TypeScript, improving maintainability and alignment with the team's modern frontend architecture.
- Developed and enhanced data-intensive enterprise interfaces including dashboards, Events and Devices tables, and reusable C3 DataGrid and common table components.
- Built the Relationships Widget for the Devices experience and developed the Skylar AI graph, contributing to visualization and analysis of AI-generated insights and anomalies.
- Worked extensively with GraphQL to integrate frontend functionality with backend data, troubleshoot data issues, and support complex application workflows.
- Diagnosed and resolved production issues affecting multi-column filtering, table behavior, and Skylar AI calculations, validating fixes through automated testing and system-level testing.
- Wrote automated tests with feature and bug-fix changes, participated in code reviews and bug bashes, and collaborated with engineers, QA, and product teams across multiple Agile teams.

Full Stack Developer

Aug 2021 – May 2023

George Mason University – Peterson Hall

Fairfax, VA

- Developed and tested APIs and full-stack applications using JavaScript, Java, SQL, and RESTful services; performed API testing and latency analysis with Postman and JUnit.
- Designed SQL databases, analyzed application data, administered Linux systems, and implemented accessible web experiences following WCAG 2.2 AA and WAI-ARIA standards.

Full Stack Developer

Jun 2022 – Aug 2022

Anheuser-Busch (Internship)

St. Louis, MO

- Developed RESTful APIs supporting front-end applications, improving data accessibility and accuracy.
- Automated unit tests and built API monitoring dashboards using Git, saving the company 30 hours/week.

PROJECTS

RunAware — Smart Safety Headphones for Runners | *Python, Raspberry Pi, TensorFlow Lite, OpenCV, Flask, React*

- Designed a wearable safety system using computer vision and sensors to detect approaching people and vehicles, with real-time alerts delivered through haptic motors and audio cues.
- Built a Flask backend and React/Vite monitoring dashboard for live video, events, and device status over local Wi-Fi.

Server-side Business Logic and Android Client Mobile App | *Java, Android SDK, SQL*

- Developed an Android client app demonstrating server-side interactions with a database, using Java Server Pages with SQL select statements to retrieve data.
- Implemented a login system and led a team through delegated development tasks to deliver the project.

EDUCATION

George Mason University

Fairfax, VA

Bachelor of Science in Computer Science

Relevant Coursework: Algorithms and Data Structures, Database Systems, Operating Systems, Distributed Systems/System Development
